-!- FUNCTION: THROMBIN-LIKE SNAKE VENOM SERINE PROTEASE.
-!- SUBCELDLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: ERPRESSED BY VENOM GLAND.
-!- TISSUE SPECIFICITY: BELONGS TO PEPTIDASE FAMILY S1; ALSO KNOWN AS THE TRYPSIN FAMILY. SNAKE VENOM SUBFAMILY.

Submitted (OCT-2000) to the EmBLGeobank/DDBJ databases.
C. I- SUBCELLUIAR LOCATION: Secreted (Probable).
C. I- ALTERNATIVE PRODUCTS: Z isoforms; 1 (shown here) and 2; are
produced by alternative splicing.
C. I- SIMILARITY: BELONS TO PEPTIDASE FAMILY SI; ALSO KNOWN AS THE
TRYPSIN FAMILY. KALLIKREIN SUBFAMILY.

MILL STRUCTURE OF a complement factor D mutant expressing enhanced catalytic activity.";

J. Biol. Chem. 270:2499-24405 [1995).

I. FOUNCTION: FACTOR D CLEAVUSS FACTOR B WHEN THE LATTER IS COMPLEXED WITH FACTOR C3B, ACTIVATING THE C3BBB COMPLEX, WHICH THEN BECOMES THE C3 CONVERTARES OF THE ALTERNATE PATHWAY. ITS FUNCTION IS HOMOLOGOUS TO THAT OF C1S IN THE CLASSICAL PATHWAY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ω.,

-!- FUNCTION: FACTOR IX IS A VITAMIN K-DEPENDENT PLASMA PROTEIN THAT PARTICIPATES IN THE INVERINGE PATHWAY OF BLOOD COAGULATION BY CONVERTING FACTOR X TO ITS ACTIVE FORM IN THE PRESENCE OF CA++ IONS, PHOSPHOLIPIDS, AND FACTOR VIIIA.

-!- CATALYTIC ACTIVITY: Hydrolyses one Arg-|-Ile bond in factor X to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               FACTOR IXA (ACTIVE FORM) HEAVY CHAIN.
EGF-LIKE 1, CALCIUM-BINDING (POTENTIAL).
SERINE PROTEASE.
                                                                                                           EXCISES THE
                                                                                              form factor Xa.

-!- SUBUNIT: FACTOR IX IS ACTIVATED BY FACTOR XIA, WHICH EXCISES THE ACTIVATION PEPTIDE AND THUS PRODUCES A MOLECULE CONSISTING OF 2 CHAINS HELD TOGETHER BY ONE OR MORE DISULFIDE BONDS.
-!- MISCELLANEOUS: CALCIUM BINDS TO THE GAMMA-CARBOXYGLUTAMIC ACID (GLA) RESIDUES AND, WITH STRONGER AFFINITY, TO ANOTHER SITE, BEYOND THE GLA DOMAIN.
-!- SIMILARITY: CONTAINS 2 GGF-LIKE DOMAINS.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY SI; ALSO KNOWN AS THE
"The structure of (xylose)2glucose-O-serine 53 found in the first epidermal growth factor-like domain of bovine blood clotting factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PROSITE; PS00135; TRYPSIN_SER; 1.

C -1- FUNCTION: CLS B CHAIN IS A SERINE PROTEASE THAT COMBINES WITH CLO
AND CLS TO FORM CL, THE FIRST COMPONENT OF THE CLASSICAL PATHWAY
OF THE COMPLEMENT SYSTEM.
C TURN, ACTIVATE CLAVES COMPONENT CF TO C4A AND C4B, AND
C CATALYTIC ACTIVITY: CLEAVES COMPONENT CF TO C4A AND C4B, AND
C COMPONENT C2 TO C2A AND C2B.
C -1- SUBJUNT: C1 IS A CALCIUM-DEPRENDENT TRIMOLECULAR COMPLEX OF CLO, R
AND S IN THE MOLAR RATION OF 1:2:2. ACTIVATED CLS IS AN DISULFIDE-
LINKED HETERODIMER OF AN HEAVY CHAIN AND A LIGHT CHAIN.
C -1- SIMILARITY: CONTAINS 2 SUSHI (SCR) DOMAINS.
C -1- SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.
C -1- SIMILARITY: CONTAINS 1 EGF-LIKE DOMAINS.
C -1- SIMILARITY: CONTAINS 1 EGF-LIKE DOMAINS.

CC --- FUNCTION: THROMBIN-LIKE SNAKE VENOM SERINE PROTEASE. DISPLAYS A SPECIFICITY SIMILAR TO TRYPEIN. RELEASES ONLY FIBRINOPEPTIDE A IN THE CONTEXTION OF FIBRINOGEN TO FIBRINOCEN THE CONTEXTION OF FIBRINOGEN BETA CHAINS.

CC --- CATALYTIC ACTIVITY: PREFERENTIAL CLEAVE FIBRINOGEN BETA CHAINS).

CC --- SIBRELOUAR LOCATION: Secreted.

C--- TISSUE SPECIFICITY: EXPRESSED BY VENOM GLAND.

C--- MISCELLANGOUS: INHIBITED COMPETITYLELY BY AMIDINES AND GUANIDINES,

AND IRREWERSIBLY INHIBITED BY DITSOPROPYLELUOROPHOSPHATE.

C--- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1; ALSO KNOWN AS THE TRYPEIN FAMILY: SNAKE VENOM SUBFAMILY.

STATES: POOTOS: 10 PEPTIDASE FAMILY.

RESP: POOTOS: 10 PEPTIDASE FAMILY.

Serrano S.M.T., Mentele R., Sampaio C.A.M., Fink E.;
"Purification, characterization, and amino acid sequence of a serine proteinase, PA-BJ, with platelet-aggregating activity from the venom of Bothrops jararaca.";
Biochemistry 34:7186-7193(1995).
-!- FUNCTION: THROMBIN-LIKE SUNKE VENOM SERINE PROTEASE. POSSESSES AMIDOLYTIC ACTIVITIES. CAUSES THE AGGREGATION OF PLATELETS IN PLATELET RICH PLASMA AND IN SUSPENSIONS OF WASHED PLATELETS.
DOES NOT HAVE FIBRINOGEN-CLOTTING ACTIVITY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                      -!- CATALYTIC ACTIVITY: PREFERENTIAL CLEAVAGE: ARG-, LVS-
-!- ENZYME REGULATION: INHIBITED BY PHENYLMETHANESULFONYL FLUORIDE.
THE AMIDOLYTIC ACTIVITY IS ALSO INHIBITED BY BENZAMIDINE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (BY SIMILARITY).

Purffication and characterization of bothrombin, a fibrinogen-
clotting serine protease from the venom of Bothrops jararaca.";

Biochemistry 33:1843-1849(1994).

-!-FUNCTION: THROMBIN-LIKE SNARE VENOM SERINE PROTEASE. AGGREGATES PLATELETS IN THE PRESENCE OF EXOGENOUS FIBRINOGEN, POSSIBLY THROUGH INTERACTION WITH GLYCOPROTEIN 1B. ACTIVATES BLOOD COAGULATION FACTOR VIII.

-!-CATALITIC ACTIVITY: PREPERENTIAL CLEAVAGE: ARG-GLY BONDS IN FIBRINOGEN ALPHA CHAINS (DOES NOT CLEAVE FIBRINOGEN BETA CHAINS).

-!-ENEXME REGULATION: INHIBITED BY DIISOPROPYL FLUOROPHOSPHATE, BUT NOT BY HRUDIN.
